Meteorite Nature And Culture Earth

Most meteorites found on Earth come from shattered asteroids, although some come from Mars or the Moon. In theory, small pieces of Mercury or Venus could have also reached Earth, but none have been conclusively identified. Scientists can tell where meteorites originate based on several lines of evidence.

“A meteor. Wait...or is it a meteorite? Or a meteoroid?” It is a meteor. A meteor is the streak of light that you see in the sky when a small piece of cometary or asteroidal material enters the atmosphere at high speed and burns up because of the frictional heating from the piece’s collision with the atoms and
