Some things I do notice is that some of the things Zangwill covers, Jackson leaves as an exercise. For example, Zangwill discusses Thompson's theorem, but Jackson just says "this is the theorem, prove it". The problems in Zangwill seem to be a mixture of hard undergraduate-type problems and some graduate level problems.

We illustrate the use of Maxwell's term in Ampere's law and also the conservation laws of electromagnetic theory. First, we outline the conservation laws for energy and linear momentum which often appear in textbooks of electromagnetism, and then we show how these conservation laws can be extended to the conservation law for angular momentum and to the relativistic conservation law involving ...
